

Primary Worksheets: Transportation

Transport is moving people or things from one place to another. There are three main kinds of transportation, land, water, and air.

The whole world needs transportation to live their lives. Food gets delivered to supermarkets by trucks or ships. People need transportation to get to and from work. We can use air transportation to go on holiday and visit other countries!

Primary Worksheets: Transportation

Transportation in the past was a lot different to what we have today. Walking was the main method before using animals like horses and camels to carry goods and people.

The wheel was invented more than 5,000 years ago. It allowed animals to pull carts instead of carrying goods and people.

Canoes and rafts were made for water transportation by ancient people. Ships became more faster and more powerful when rowing was invented.

Primary Worksheets: Transportation

Transportation evolved as time went on. In the 1700s, the steam engine was invented. It allowed ships to sail without wind. It also began the growth of railroads, making steam trains one of the most convenient ways to travel.

In the late 1800s the first bicycles and cars came. It made life easier, as it became the quick and easy transportation method for people. The first plane was built in 1903 by two brothers. The jet engine was invented in the 1940s, which made air travel the fastest transportation in history.
